				Music Mondays: <i>The Practice and Appreciation of Music</i> Art Wednesdays: <i>The Practice and Appreciation of Art</i> (Grades 3-6 Together)			
			Theology: <i>Bible and Catechism, Christian Worship and the Christian Life</i> (Grades 3-6 Together)				
Orange = Disciplines in Cycle: Subjects in orange are where students in grades K-2 are learning the same content in class as the teacher differentiates appropriately in the assignments and assessments, and the parents do likewise on at-home days. This cycle approach works well for subjects without prerequisites (like elementary level history, where it doesn't matter if you learn world history before American history; or elementary level science, where it doesn't matter if you learn about animals before plants or vice versa). This approach also fosters friendships and care across ages, which is central to our mission to build healthy family cultures. The disciplines that are in cycle for grades K-2 prepare students for elementary school grades 3-6.			Red = Disciplines in Cycle: Subjects in red are where students in grades 3-6 are learning the same content in class as the teacher differentiates appropriately in the assignments and assessments, and the parents do likewise on at-home days. This cycle approach works well for subjects without prerequisites (like elementary level history, where it doesn't matter if you learn world history before American history; or elementary level science, where it doesn't matter if you learn about animals before plants or vice versa). This approach also fosters friendships and care across ages, which is central to our mission to build healthy family cultures. The disciplines that are in cycle for grades 3-6 prepare students for middle school grades 7-8.				
Black = Disciplines in Sequence: Subjects in black means that students in grades K-2 are learning different content in class as the class is divided into stations or split with another teacher and/or aide. This sequence approach works well for subjects that have prerequisites (like reading, where is you must know the alphabet before you can read; or writing, where you must know how to form your letters before you can write a paragraph; or math, where you need to know your numbers before you learn how to add). This approach helps us focus on individual student needs to enable intellectual and moral growth for each child.
